

Background

There are some standard reports that came with 4-H Online that Wisconsin has no control over. These reports are in two main categories – ES237 and Financial.

ES237

The ES237 reports are named for a discontinued annual federal report. This report counted certain demographic information on the numbers of approved youth participants and adult volunteers in the program. The standard reports in this section can be used to give *estimates* for these counts.

Activity Count

The number of youth enrolled in each project area. This report includes the National Category for each project.

Ethnicity Count

The count of youth by ethnicity and by race.

Participation Count

The count of youth by delivery mode. Youth enrolled in multiple clubs are counted multiple times.

Volunteer Count

The count of volunteers, both adult and youth. The youth count is based on those that selected a volunteer role when selecting a club or project.

Youth Count

The count of youth by grade, gender, and place of residence.

ES237 (All Reports)

A single file with all the above reports.

Validation – Errors Youth

An error checking report that can be run near year end to discover any youth that have enrollment errors that could cause problems with year-end reporting.

Validation – Unique Volunteers

A report where each volunteer (youth and adult) is listed once.

Validation – Unique Youth

A report where each active youth is listed once with their demographic data.

These reports all ignore any members in clubs with certain delivery methods, such as “Administrative/Organizational Unit” and “Not Connected With Youth Group” so the numbers will vary from other reports.

Financial

The financial reports are useful if you use the 4-H Online system for recording check payments for event registrations and if you accept credit card payments.

Check Payments

This report will list all the check payments you have received in the dates you specify. Run the report and enter the state and end dates then click the Download Excel button.
